DICA Brings Advanced Ground Protection Solutions to The ARA Show

29 November 2024 by DICA

See ground protection and equipment support products at booth #1476.

DICA, the industry-leading provider of high-performance outrigger pads and ground protection products, will be exhibiting at the ARA Show, January 30-February 1, 2025, at the Las Vegas Convention Center. DICA's innovative products enable safe setup and peace of mind for contractors, and complement equipment found in construction and event rental fleets.

"Ground protection mats give construction equipment rental companies options for increasing add-on rental revenue and event rental companies tools to improve productivity and reduce ground repairs. DICA offers a wide variety of solutions for use with small compact equipment to the heaviest mobile trucks and equipment,"

said Kevin Koberg, Sales Director for DICA.

Two products introduced in 2024 are new at the 2025 ARA Show.

Providing lightweight yet durable temporary access, EnviroMat allows users to set up vehicle roadways quickly and without tools. Its modular design supports various site configurations, while its unique micro-traction surface minimizes slippage, offering superior turf protection to maintain ground integrity under heavy loads.

For heavy-duty applications, XtremeMat excels at creating temporary access roads and platforms in conditions where conventional methods would fail. The large mats feature overlapping flange joints that bolt

together forming a single rigid assembly. This feature allows users to combine XtremeMat together in any direction for modular site layouts.

Also on display will be two popular solutions for rental fleets. "SlatTrax is a unique solution when it comes to ground protection. It is the only temporary roadway product that deploys and retrieves in minutes, while MaxiTrack is both heavy duty and maneuverable with an interlocking flanged design," said Koberg.

Rounding out the options for rental applications are DICA's SafetyTech Outrigger Pads, which deliver superior strength, stiffness, and toughness for use with many outrigger-enabled equipment found in rental fleets. SafetyTech products are available in Medium, Heavy, and Super Duty, and Specialty Pads for use with equipment such as MEWPs, trailers, service trucks, concrete pump trucks, and knuckleboom cranes.

Find out how DICA's equipment setup solutions can help rental companies increase add-on rental revenue at Booth #1476.
