engcon to Participate in Bauma 2025 Exhibition in Munich

18 March 2025 by Engcon

- engcon will debut the EC309, the second model in its 3rd generation tiltrotator, at Bauma 2025 in Munich.
- The new generation tiltrotator offers significant fuel savings compared to the previous generation.
- engcon, a leading global supplier of tiltrotators, has been participating in Bauma since 1998 to showcase the efficiency and benefits of its products.
- The EC-Oil system, which allows for safe and quick hydraulic tool changes, will also be featured at engcon's stand.

- **Following Bauma, engcon will launch the Dig Days roadshow across Europe to demonstrate the capabilities of its tiltrotators to end customers.**

From April 7–13, Bauma—the world’s leading trade fair for construction machinery—takes place in Munich, Germany. engcon will focus on the world premiere of EC309, the second model in the 3rd generation tiltrotator. The new generation is engcons best ever with essential fuel-savings compared with the 2nd generation.

Swedish tiltrotator manufacturer engcon is the leading global supplier of tiltrotators. While the tiltrotator concept is well-established in the Nordic region, it has expanded significantly across much of Europe in recent years. engcon first participated in Bauma in 1998, and its continued presence at the event is essential for showcasing the tiltrotator concept and its many benefits.

– Seeing our products in action is crucial because many people can hardly believe just how efficient an excavator equipped with a tiltrotator truly is, says Mark Lisman, Regional Director Europe. A tiltrotator together with our attachments can replace the need for multiple machines and contributes to the job being done more effectively and fuel-saving. Additionally, using a tiltrotator also reduces the need for manpower at the work site. This makes it an ideal investment for those looking to complete more projects in less time while also reducing their carbon footprint, he continues.

EC-Oil, engcon's system for automatic coupling of hydraulic tools also has a natural place at engcon's stand.

– Compared with other full automatic coupling systems on the market, EC-Oil can safely change tools in seconds without dealing with moving hoses or electric cables during coupling. This minimizes the risk of pinching and wear which decreases the risk of oil leakage, says Mark Lisman, Regional Director Europe.

New this year, following Bauma, engcon will launch the engcon Dig Days, an extensive roadshow across Europe. The Dig Days tour will visit multiple countries, giving end customers the opportunity to experience the full capabilities and benefits of the tiltrotator.
