Combilift Launches Combi Load Xtender at Ligna 2025 – Revolutionising One-Side Truck Loading

26 May 2025 by Combilift

- Combilift introduces the Combi Load Xtender at Ligna 2025, enhancing one-side truck loading efficiency.
- The Combi Load Xtender is designed for restricted loading areas, optimizing space usage and safety.
- Key features include one-side access loading, ultra-low mechanism height, and enhanced safety measures.
- The open-frame pantograph structure provides unobstructed visibility for precise handling.

- **The heavy-duty build ensures durability in demanding environments, with patent applications filed in Europe and the USA.**

Combilift continues to push the boundaries of innovation in material handling with the launch of the **Combi Load Xtender**, a new **pantograph-style load extender** that allows full truck or container loading from **one side only** – increasing efficiency, improving safety, and optimising space usage.

Unveiled at **Ligna 2025**, the **Combi Load Xtender** has been designed as a versatile and powerful solution for businesses operating in restricted loading areas, or where double-side access to trailers or rail wagons is not possible or where space is limited.

Key Benefits:

- **One-Side Access Loading:** Fully loads and unloads from a single side, streamlining operations and reducing vehicle movement and fuel consumption in congested yards.
- **Ultra low mechanism height:** Its ultra-compact design ensures smooth movement and full functionality below standard trailer height without interference.
- **Enhanced Safety:** Operators can load securely against the far closed side of the trailer, reducing the risk of products falling and keeping personnel out of busy traffic zones.
- **Unobstructed Visibility:** The open-frame pantograph structure gives clear visibility over and through the extender for precise handling and safer operation.
- **Heavy-Duty Build:** Rugged construction ensures consistent performance in demanding environments – with **patent applications filed in Europe and the USA.**

With the launch of the Combi Load Xtender, Combilift addresses a major industry challenge: making one-side loading safer, faster, and more accessible across a broad range of logistics operations.
