### **Additional updates to Terrus CVT line-up for 2025 / New technology packages to match customer requirements / Both front and rear hitches can now be joystick-controlled /**

The **STEYR®** Terrus CVT tractor range comprising the 288hp 6290, 313hp 6315 and 340hp 6340 (max hp) has been further refined to boost convenience for both owner and operator. Upgrades include new technology bundles that simplify selection of the features best suited to individual businesses' needs, and greater convenience from a revised joystick option that can now control both the front and rear linkages.

## **Tech packages simplify ordering, match customer needs, enhance resale**

Customers can now choose from three technology packs for fast and easy feature choice to suit individual demands. They can be specified alongside the existing Evolution or Excellence packages, easing the ordering process and matching business demands, while boosting residual value at trade-in.

Tech Pack 1 comprises the armrest-mounted STEYR Infomat 1200 touchscreen, plus a readiness package for a second display. Upgrading to Tech Pack 2 or 3 adds additional automation and further enhances the accuracy level of STEYR Guide auto-steering.

STEYR Terrus CVT tractors also now come with Connectivity Included. This brings seamless connected services and FieldOps™ data monitoring and management throughout the life of the connectivity modem, with no recurring subscription fees. When a new Terrus CVT is added to a customer account, qualifying existing machines can be upgraded to Connectivity Included at no extra cost\*. The FieldOps complete data management via app and web provides users with near real-time access to machine and agronomic data.

## **Joystick revision permits control of both front and rear linkages**

The armrest-integrated joystick now allows users to also operate both the front and rear linkages. Through the STEYR Infomat 1200 touchscreen, the joystick functions can be configured according to whether the tractor is operating front- or rear-mounted equipment or a combination of the two.

\*Connectivity Included is subject to current terms and conditions.
