Fliegl Grünlandtechnik builds the CUTARO

7 October 2025 by Fliegl Agrartechnik

- Fliegl Grünlandtechnik has acquired the rights to the CUTARO self-propelled mower.
- The mower is being developed and tested intensively at the Kirchdorf plant with a focus on practical usability.
- A pilot series will be launched in 2026 to collect user feedback from selected dealers and customers.
- The official public launch of the CUTARO is scheduled for 2027, with planned presentations to the press and industry.

Self-propelled mower from Kirchdorf: rights secured, development in full swing

Fliegl Grünlandtechnik announces that the company has acquired the rights to CUTARO. The innovative self-propelled mower is produced at the Fliegl plant in Kirchdorf, where it is being continuously developed.

The CUTARO is currently undergoing a dynamic phase of further development and intensive testing. As usual at Fliegl, the focus is on absolute practicality: 'We will keep refining the details until everything is just right,' emphasises the development team.

Roadmap for market launch

A pilot series for selected dealers and customers is planned for 2026 in order to gather valuable feedback from practical use. The official public launch of the CUTARO will take place in 2027.

„We look forward to presenting the CUTARO to the press and all interested parties in a timely manner and in a suitable setting. Preparations are already underway, and we will invite the industry to this important milestone in due course.“
