## EvoQuip expands jaw crusher range with Bison 220 & 220R

17 October 2025 by EvoQuip (Terex)

- EvoQuip introduces the Bison 220 and 220R, expanding its compact jaw crusher lineup.
- Both models feature an 820mm x 550mm jaw inlet and can handle materials with up to 240MPa compressive strength.
- The Bison 220R includes an optional recirculating conveyor and detachable afterscreen system for enhanced product specification and transport ease.
- Designed for efficiency and ease of use, these crushers offer fuel-saving hydrostatic drives, quick setup, and flexible operation for quarrying, demolition, and recycling tasks.

**EvoQuip®**, a global manufacturer of compact crushing and screening equipment, is proud to announce the launch of the Bison 220 & 220R, the latest additions to the compact jaw crushing range. Designed to deliver exceptional performance, efficiency, and versatility, the Bison 220/220R are high performance jaw crushing plants designed for operators in quarrying, demolition and recycling applications.

Engineered with an 820mm x 550mm (32" x 22") jaw inlet and a 240MP compressive strength, these jaw crushers can process tough materials with ease. An advanced hydrostatic drive system not only maximises fuel efficiency but also enhances performance, offering the additional capability of running the chamber in reverse.

The Bison 220R boasts an optional 'R' section (recirculating conveyor), which improves the ability of operators to achieve the required product specification. Oversize material can be recirculated back into the crusher or stockpiled, depending on operational needs. The integrated 8' x 4' single deck screen further boosts screening efficiency.

Flexibility is at the core of the Bison 220R's design. The complete afterscreen system, including the oversize conveyor, can be quickly detached, allowing the machine to run in standard mode or making transport more straightforward. Operators also benefit from the ability to raise and lower the product conveyor, providing smooth material handling across varying job sites.

"The Bison 220 and 220R combines compact design with high performance, giving operators the flexibility they need without compromising on productivity or fuel efficiency," said Andrew Armstrong, EvoQuip Product Manager. "With quick setup times, simple and intuitive operation, easy maintenance, and transport-friendly design, the Bison 220/220R offers a user-friendly yet powerful solution for crushing applications worldwide."

The launch of the Bison 220/220R, available to order now, further strengthens EvoQuip's commitment to delivering innovative, efficient, and operator-focused solutions to the crushing and screening industry.
