NUBA Group: Innovative and Sustainable Solutions for Aggregates and Minerals

20 October 2025 by Anmopyc

The NUBA Group is made up of two main companies: Nuba Screening Media, S.L. and NUBA Technical Advice, S.L. Founded in 1968 as *Talleres Núñez*, Nuba Screening Media is now a European leader in the manufacture of screening surfaces and accessories for the classification of aggregates and minerals. The company covers the full range of products related to screening and classification, always maintaining the high quality and service standards that have defined it since its beginnings.

Its current goal is to provide services all over the world through disciplined operations, ensuring controlled and continuous growth.

Its philosophy has always been based on product quality, technical expertise, and direct customer relations. For this reason, they have built a strong team of top-level professionals and a solid structural support that guarantees the highest technical responsibility, both in processes and raw materials, as well as extensive sector experience. This allows the company to offer its customers effective solutions and support, building long-term relationships.

Over time, new needs have emerged in connection with their clients' activities. To respond to these, the NUBA Group launched **NUBA Technical Advice**, a company dedicated to the development and distribution of industrial components and engineering projects. This offering is backed by the production and commercial network built over decades by the group, enabling them to serve an even wider range of industries that require these services.

The different departments of Nuba Screening Media ensure product quality and meet customer expectations—from management and technical consulting to product design and development, the production of molds and tooling required for manufacturing, and finally quality assurance, logistics, and installation when needed.

Today, Nuba Screening Media stands out as one of the leading companies in the field of classification elements. It holds the largest market share in the Iberian Peninsula and is rapidly expanding abroad with its permanent offices. Its long and consistent track record, together with strong customer recognition, has made its products highly valued internationally, with major clients in more than 60 countries.

NUBA Technical Advice was created to address the needs of Nuba Screening Media's customers.

With over fifty years of experience in the sector, supported by extensive production expertise and a solid commercial network, NUBA Technical Advice offers its clients:

- Engineering services for plant design
- Supply of stationary plants for processing rocks, minerals, and C&D waste
- Mobile crushing and screening equipment
- Plants for the production of gypsum, plaster, perlite, anhydrite, and derivatives
- Purchase and sale of second-hand machinery and equipment
- Foundry spare parts for crushing equipment

- Development and manufacture of industrial components

All screening equipment supplied by NUBA Technical Advice is fitted with NUBA Screening Media screening surfaces.

Un compromiso con la innovación y la sostenibilidad

Grupo NUBA entiende que el futuro del sector pasa por la búsqueda de procesos más eficientes y respetuosos con el medio ambiente. Por eso, la compañía orienta su actividad a desarrollar productos y soluciones que prolonguen la vida útil de los equipos, reduzcan el impacto ambiental y contribuyan a una producción más responsable. El VII CNA será el escenario ideal para compartir esta visión con el resto de actores del sector, reafirmando el papel de Grupo NUBA como referente técnico y estratégico.

Con su participación en el VII Congreso Nacional de Áridos, Grupo NUBA refuerzan su compromiso de estar al lado de los profesionales de la industria, aportando valor añadido, soluciones innovadoras y una visión de futuro en un sector que sigue siendo clave para el desarrollo económico y social.

A Commitment to Innovation and Sustainability

NUBA Group understands that the future of the sector lies in the pursuit of more efficient and environmentally responsible processes. That is why the company focuses on developing products and solutions that extend equipment life cycles, reduce environmental impact, and promote more responsible production, which reinforces its commitment to supporting industry professionals by delivering added value, innovative solutions, and a forward-looking vision for a sector that remains essential to economic and social development.
