MANITOU new member of ANMOPYC

28 October 2025 by Anmopyc

- Manitou Group joins ANMOPYC as a new member, strengthening its industry ties.
- The company has over 60 years of experience manufacturing handling, lifting, and earthmoving equipment.
- Manitou operates globally with a broad product range including telehandlers, forklifts, and mobile elevating work platforms.
- It is committed to sustainability through electric and low-emission machines and digital solutions enhancing efficiency and safety.

Manitou Group specializes in the manufacture of handling, lifting and earthmoving equipment for agriculture, construction and industries. With more than 60 years of experience based on continuous innovation, Manitou offers ergonomic and easy-to-handle machines that meet all the requirements, with a high level of safety, comfort, and performance.

Manitou Group is a global leader in the design, manufacturing, and distribution of equipment for material handling, aerial work, and earthmoving. Founded in France in 1958, the group has a long-standing track record of developing innovative, safe, and sustainable solutions for key sectors such as construction, industry, agriculture, mining, and environmental services and their machines are also used in sectors such as aeronautics and defense.

Its product offering includes fixed and rotating telehandlers, rough-terrain and industrial forklifts, mobile elevating work platforms (MEWPs), compact equipment, warehousing equipment and a wide range of attachments designed to enhance machine versatility.

With operations in over 140 countries through subsidiaries and a strong distribution network, Manitou Group actively promotes the international expansion of its industrial activity and provides a comprehensive aftermarket service that includes technical support, training, and spare parts availability.

The group is strongly committed to energy transition and digital transformation, offering electric and low-emission machines and connected solutions that increase operational efficiency, fleet management capabilities, and user safety. Its strategy aligns with the sustainability goals and technical demands of the global market.
