All-New Case IH Puma Series Tractor: Improved Maneuverability and Elevated Operator Experience

11 November 2025 by CASE IH

- Case IH introduces the redesigned Puma series tractor available in 155, 165, and 185 horsepower models with improved performance and fuel efficiency.
- Enhanced maneuverability is achieved through a new front axle suspension, agile turning radius, and upgraded braking and transmission systems.
- Operator comfort is elevated with updated cab features including suspension, seating, and ergonomic controls.

- The tractor integrates advanced precision technology with multiple configurable packages for implementation compatibility and future upgrades.

Available in 155, 165 or 185hp options / 750-hour service intervals / updated linkage and hitch / features integrated precision technology

Case IH is revealing its all-new Puma® series tractor, reconfigured for unmatched performance with the most reliable and efficient runtime. Featuring an entirely new vehicle design, the reimagined Puma series allows operators to enjoy a smoother ride with superior maneuverability as well as access to the latest precision technology.

Reliable Performance

The Puma – available in 155, 165 or 185hp models – sets a new standard of performance and efficiency for varying operational needs. Featuring an advanced CVXDrive™ transmission, the Puma offers improved load handling, traction and working speeds, allowing operators to use power more economically. Costs are lowered thanks to efficient fuel consumption, and productivity increases with long 750-hour service intervals and the powerful FieldOps™ platform. The tractor's gross vehicle weight has increased by 18 percent to 13,500kg and a max payload of 5,500kg.

Enhanced Maneuverability

The tractor's compact, powerful package provides excellent maneuverability, while the new front axle suspension offers an agile turn radius of 11.4m with greater safety and stability at high speeds of 50kph. Enhanced braking responsiveness, updated linkage and hitch, and a new transmission improve the tractor's drivability and implement control.

"The Puma series is known for reliability and versatility. From broadacre arable farming and multi-application contractor tasks to livestock operations, you can count on the Puma to get the job done," said Ross Macdonald, product marketing manager EMEA for Puma Tractors at Case IH. "The new design and latest technology features have not only upgraded the operator experience but allow you to accomplish more in the

field each day.”

Greater Comfort

Seamlessly blending comfort and functionality, the Puma features an in-cab experience and integrated technology for improved operator ease and productivity. The cab’s entry, styling, storage and display – along with new cab suspension, fully active seat option and new MultiController Armrest – have all been updated to boost operator comfort, even during long hours in the cab.

Integrated Technology

The Puma features integrated precision technology with three Technology Packages available to meet individual operators' needs. The Puma is configured with ISOBUS and Tractor Implement Management (TIM) for compatibility with the implements of today, as well as Connectivity Included and expandable electronic architecture for ease of future technology integration.

To see the newly designed Puma series tractor and learn about its additional features, visit Case IH from 9th to 15th November, 2025 at Agritechnica in Hanover, Germany, located in Booth B21, at Hall 3, visit [caseih.com](https://www.caseih.com) or talk with your local Case IH dealer.
