Case IH New Farmall M Series Tractors Bring More Power, Versatility and Advanced Technology

18 November 2025 by CASE IH

- Case IH introduces the Farmall M series tractors offering 100 to 120 horsepower with a 4-cylinder Stage V engine.
- The tractors provide versatility for diverse tasks, featuring a strong rear lift capacity and advanced transmission and suspension options.
- Operator comfort is enhanced through cab design, lighting, and driving aids, with two package options tailored to different needs.

- Integrated precision technology includes subscription-free telematics, ISOBUS compatibility, and advanced guidance systems to optimize productivity.

Designed for high-quality performance and demanding tasks / Available in 100, 110 and 120hp / New in-cab comfort / Flexible multi-purpose machine

Case IH is introducing the Farmall® M series tractor, designed to deliver power and performance in everyday applications through to the most demanding tasks. With seamlessly integrated technology and heightened operator comfort, the Farmall M series delivers superior productivity and execution, regardless of the operation size or terrain. The Farmall M – available in 100M, **110M** and 120M models – was created to handle an operator's busiest days, continuing the Farmall legacy of dependability.

High-Quality Performance

The new tractor series features a 4-Cylinder, 3.6L Stage V engine, delivering 100-120hp. Positioned at the top of the Farmall range, the Farmall M has a generous 5200kg rear lift capacity and 8-ton gross vehicle weight, with top speeds of 40 kph at 1,970 rpm. The series provides operators with a more comfortable drive and is designed for farmers who demand strength, simplicity and smart functionality in a versatile utility tractor. The Farmall M has an engine after-treatment system that meets stage V emission requirements. Its convenient location under the hood also offers improved visibility.

Flexible for Everyday Use

Built to be an operator's most durable, multi-purpose machine, the Farmall M is built for versatility and ideal for the varied needs of municipalities, row crops or livestock operations. The ActiveDrive 4 16x16 semi-powershift transmission provides precise speed control with up to eight automatic gear shifts, and the optional front axle suspension increases traction and stability across varying terrains.

"The Farmall M more than lives up to its reputation as a high-performing, dependable tractor, and our new models deliver the most exceptional power and experience yet," said Federico Condini, global leader for small tractors, Case IH. "As our premium option in the Farmall line, the Farmall M well exceeds utility tractor standards, allowing operators to accomplish more each day – and to do so comfortably."

Premium Comfort

The tractor's cab and front axle suspension provide a smooth ride, while the front hood design, one-piece front windscreen, after-treatment system under the hood and new LED lighting deliver best-in-class forward visibility. Driving aids like clutch-less shuttle, auto shift and the electronic mid-mount joystick offer operators greater precision, control and ease, increasing productivity.

The Farmall offers two distinct packages to suit different customer requirements. The Selection Package provides a simple, durable, and cost-effective solution for essential utility while the Advanced Package provides enhanced comfort with a suspended cab, suspended front axle and a low-frequency suspended seat with fore and aft isolation.

Integrated Precision Technology

Operators can further optimize their machine's daily work through integrated precision technology, such as FieldOps™ which provides in-depth, real-time machine analytics. The Farmall M can be equipped with subscription free, entry-level telematics, enabling fleet management capabilities through FieldOps. It also features ISOBUS implement compatibility, and offers high performance guidance with DirectSteer steering solution, available with a Pro 700 Plus guidance kit.
