

TBR 220 exceeds all expectations: 100 sold in just 5 months

17 February 2014 by Ruthmann

RUTHMANN has already detailed the amazing capabilities of the company's newest STEIGER ® innovation – the TBR 220 – since it premiered in the autumn of 2013. Now, the German truck-mounted aerial platform specialist is reporting an unprecedented influx of new orders. **RUTHMANN** customers recognize the tremendous advantages of these innovative, state-of-the-art work platforms.

The TBR 220 is not only the current reach champion in the 3.5 t category but with 100 new orders in just 5 months, it is also the best-selling **RUTHMANN** STEIGER ® ever.

The STEIGER ® TBR 220 is mounted onto a 3.5 t chassis (GVW). With this innovative new model, **RUTHMANN** is sticking with its popular "multi-chassis system".

The TBR 220 can also be mounted on heavier/all-terrain truck chassis. In the coming days, customers will receive information regarding the many mounting possibilities. With such a variety of different types of chassis to choose from, **RUTHMANN** is attracting customers outside the working platform rental business. These customers are not that concerned about class B driver's licence issues. Greater payload reserves for additional tools and materials and off-road capabilities that facilitate maneuvering/working in rough, uneven terrain are important features that appeal to craftsmen, municipalities, and electricity providers.
