Hyundai adds HX10A Z micro excavator to compact line

21 April 2026 by HD Hyundai Construction Equipment Europe

- Hyundai launches the HX10A Z, the smallest model in its A-Series compact excavator range, delivering leading performance and versatility.
- The machine features a powerful 7.6kW diesel engine, twin hydraulic pumps, and a retractable undercarriage allowing passage through narrow 730mm doorways.
- Its zero tail swing design, increased digging depth, longer reach, and higher dump height enhance stability and productivity on site.
- Protective design elements and an ergonomic operator station with a folding ROPS canopy improve durability, safety, and comfort.

Hyundai has completed its A-Series range of compact excavators, with the launch of the HX10A Z. This micro excavator is the smallest model in the line-up, yet delivers class-leading performance, stability and versatility.

- Powerful 7.6kW (10.35hp) diesel engine
- Twin pump hydraulic system
- Retractable undercarriage permits access through domestic doorways
- Zero tail swing design for maximum safety on site
- Increased dump height and longer reach than previous model

The HX10A Z tips the scales at 1,165kg, putting it at the top of the micro excavator sector. With a zero tail swing design, the compact machine sits on a retractable undercarriage. Fully retracted, the machine can pass through a 730mm doorway, yet when fully extended to 1,110mm, the machine delivers stability and productivity. This is assisted by the standard dozer blade, adding to the excavator's versatility.

Power comes from a 7.6kW (10.35hp) diesel engine that delivers 39.4Nm of torque. With twin 10.4 litre/min hydraulic pumps, the machine offers up to a class-leading 10.8kN of bucket breakout force and 6.3kN of dipper arm force. Advanced rubber engine mounts reduce vibration and boost durability.

Built with a single high specification, the machine has a 1,450mm monoboomb and an 890mm dipper arm. This provides a maximum digging depth of 2,205mm and a forward reach of up to 3,400mm. This increased dump height and longer reach makes it easy to load 1-tonne site dumpers and skips, while two-way auxiliary piping is standard, suitable for a variety of powered attachments.

The HX10A Z has a top mounted boom cylinder, for additional protection from damage and hydraulic hoses are internally routed for protection from impact. Front guards and LED working lights further protect dig-end components and provide improved visibility in all working conditions.

The machine is equipped with a folding ROPS canopy, for improved access and easier transportation. An ergonomic operator station has adjustable consoles and secure seating, providing a comfortable working environment.
