Sandvik completes jaw crusher range

10 July 2026 by SANDVIK

- Sandvik completes its upgraded jaw crusher range, offering a unified portfolio focused on safety, ease of use, and reliable performance.
- New features such as the hydraulic wedge setting system and ACS-j control system simplify crusher operation and reduce operator exposure.
- Design improvements enhance operational transparency and usability, validated by positive customer feedback.
- The range delivers consistent performance across applications, supporting efficiency, reduced downtime, and lower operating costs.

Sandvik announces the completion of its upgraded jaw crusher range, now offering a fully unified portfolio designed to improve safety, simplify operation and deliver reliable performance across applications.

With the full range now in place, customers can rely on solutions tailored to their specific operation, supported by a consistent Sandvik-standard approach and insight across the entire crushing spectrum.

Focused on what matters most

The new Sandvik jaw crusher range represents a focused step forward in addressing what matters most to customers: safe operation, ease of use and consistent productivity.

Key upgrades across the range simplify crusher setting and control while reducing manual intervention and operator exposure. With solutions such as the hydraulic wedge setting system, synchronized retraction arrangement and the ACS-j control system, operators can manage their crushing process more easily and with greater confidence.

Improved usability and operational transparency

The updated design enables simpler and safer adjustment procedures, along with improved visibility and control of critical operating parameters. This contributes to a more predictable crushing process, supporting reliable performance and availability.

These improvements have been validated through direct customer engagement, with notably positive feedback from exhibitions and follow-up discussions. Customers clearly recognize the value of improved usability, safer workflows and enhanced operational transparency.

Reliable performance and efficient operation

The complete jaw crusher range delivers consistent performance across applications, helping reduce downtime and support stable productivity.

By combining reliable operation with simplified processes, the range also contributes to improved efficiency and lower operating costs over time.

Aligned with market expectations

"These upgrades confirm that our development efforts are well aligned with market expectations," says Martin Johansson, Product Manager Jaw, Gyratory and Impact crushers, Rock Processing. "By focusing on safe operation, ease of use and consistent productivity, we are delivering solutions that are more intuitive, reliable and better suited to the needs of our customers."

With a complete range now in place, Sandvik further strengthens its position as a partner that understands the full scope of primary crushing.

Better crushing starts here, with solutions designed to deliver reliable performance, improved efficiency and consistent results from the very first step.
