

RB Components at APEX

2 May 2014 by RB Components

Rb Components expose again at APEX the International Fair in Amsterdam, a team of three will be responsible for showing our offer to all clients we can contact for the duration of the exhibition days .

The offer will be varied, the main novelty will be to present our new family by Hall effect joysticks, these joysticks through a robust and reliable design attached to a eletronic development wit components and detectors of the latest generation for a final product of high performance.

The controls by Hall effect group of accuracy in the values (removing the, potencion metros as main component) while expanding their life cycles as there is no mechanical wear and work through this family of joysticks RB Components jumps into an important technological catching up of the leading producers and handlers joysticks worldwide.

Moreover Rb Components will also present its new range of fiberglass hoods, improved and strengthened models that increase their duration of life as well as the capacity to shock and friction. Designs such as those of origin with modifications and reinforcements in the parts of the hoods we understand weaker are the main differences of our hoods with respect to others.

Likewise manufacturing materials are completely unflameable and repel the flames, this quality attached to a fine finish make of our range hoods and covers with look great, of course accompanied by the best market price.
