

Metal House takes part in LogiMAT 2015

16 January 2015 by Metal House

Metal House has worked in the steel industry for over 30 years, specializing in the manufacture of logistic structures for fashion.

Years of experience have enabled MH to create a wide range of modular products offering the most efficient and customized solutions.

Metal House is located in northern Italy, near Verona, and its custom designed warehouses are spread all over Europe, Middle East and Africa. The warehouses built contain clothes and accessories of some of the most famous fashion brands, such as Burberry, Valentino, Armani, Emilio Pucci, Guess, Woolrich, Geospirit, Calvin Klein etc.

MH's innovative clothing storage system combines the Italian quality of their products with the latest international safety and innovation standards, providing logistic equipment, installation and trial tests worldwide.

Metal House's solutions are fully modular warehouses that can be adapted following the requests of the clients and the needs of the stored garments and accessories.

Moreover, the company is now developing a new line of automated conveyors moving the garments on overhead trolleys that run completely automatically on rails, arriving to the assigned storage area through aluminum switches.

All elements are made of galvanized steel composing a warehouse storage system that combines high mechanical strength and long lifespan with an elegant, refined aesthetic.

The technology used for the warehouse structures allows a drastic reduction in assembly times and therefore the overall labor cost for the customer.

Metal House is always a top quality partner for the multinationals operating in the Fashion Industry and in fashion logistic distribution, succeeding in matching the client's needs with the modularity of its system, allowing maximum operational flexibility.

The whole Metal House product range allows the customer to obtain different logistic solutions in a fast and easy way

MH's know-how guarantees to any kind of customer the personal and innovative realization of customized projects.

The revolutionary storage system provided by the Company has proved a cost cutter: MH's space optimization allows significant energy efficiency combined with a reduction of the warehouse personnel, thus reducing maintenance costs.

The automated pull-off extensions and conveyors will dramatically reduce the waste of time taken to load and unload the garments stored in MH's logistic solutions.

Ultimately, the logistic systems provided by Metal House will increase the warehouse's versatility thanks to shelving and railing systems that can quickly be assembled and dismantled, allowing the structure of the warehouse to change according to the kind of goods arriving.
