

AMMAN Russia:Progressing very well

21 October 2011 by Ammann

Since its founding in 2006, Ammann Russia has invested a great deal of time and effort in promoting our asphalt mixing plants, compacting equipment and other products in Russia and the surrounding countries. As a result, the company has already acquired a large number of regular customers, and is well placed to seize the opportunities presented by the road building programme that is under way in Russia.

Three Uniglobe plants were supplied already in 2007, and further projects were completed after the economic crisis – three plants in St. Petersburg and one in Moscow. Ammann Russia has realised a number of major new projects since the beginning of 2011: an asphalt mixing plant JustBlack 120 in Stawropol, two JustBlack 120 plants for the main road project along the Black Sea coast for the 2014 Olympic Winter Games in Sochi, a Uniglobe 240 in the Perm region and a CB280L in Smolensk.

Ammann Russia is now in its fifth year of operations; its employees are currently working on numerous other projects. Ammann has definitely arrived on the Russian market!
